Dear Hiring Team,

I am applying for the Senior Winter Operations & Grasshopper Mitigation Lead role because it matches the work I already do: planning winter readiness early, documenting it sector by sector, and keeping operations steady when the season turns difficult.

WHO I AM

An operations planner in Nordic granary networks, working across winter preparedness, contingency procedures, and inventory tracking. My record spans audit-ready documentation, a spreadsheet-to-ERP migration, and coordination across storage sectors and colonies. I prefer to prepare before winter arrives rather than react once it has.

WHAT I BRING

Focus Area	Operational Expertise
Winter readiness	Readiness planning across six subterranean storage sectors and three colony cycles, documented sector by sector.
Contingency procedures	Authored procedures for rain, frost, and grasshopper activity, reviewed annually and adopted region-wide.
Audit & documentation	Records reviewed annually by Cold Storage Cooperative auditors; certified Cold Storage Cooperative Auditor (CSCA).
Inventory & tracking	Weekly reconciliation on spreadsheets and colour-coded boards; led migration to a structured colony ERP pilot.
Storage engineering	Co-inventor of Patent EP-AC-0042, a modular subterranean granary geometry that reduces inter-chamber moisture migration.

WHY THIS POSITION

The responsibilities read like a description of my current work. Coordinating readiness across storage sectors, maintaining audit-ready records, developing procedures for rain, frost, and grasshopper activity, and assisting a move from spreadsheet planning to colony ERP tooling are all things I have done and can show. The annual Winter Simulation Week is familiar too: I have run simulation cycles across three colonies and fed the gaps back into the next plan.

HOW I WOULD CONTRIBUTE

- Bring existing contingency procedures for rain, frost, and grasshopper volatility into a single audit-ready set, reviewed on a fixed annual cycle.
- Support the migration from spreadsheet planning to colony ERP tooling, drawing on the pilot migration I led.
- Keep readiness planning documented sector by sector, so handovers and audits stay traceable through seasonal peaks.

FOUNDATION

Hands-on: contingency procedures, sector-level readiness plans, and inventory reconciliation maintained through repeated winter cycles.

Professionally: published work on winter preparedness and pheromone-trail route optimisation, plus a granary-geometry patent, alongside ISO records, risk, and quality familiarity (9001, 30301, 31000).

Two preferred items I do not yet hold: reporting automation in Python or SQL, and ISO 27001. Both are short to close, and I would treat them as early priorities rather than claims to make now.

Kind regards,

Anita Myre-Kornfeldt
